

Metal Frame Platforms

Low rise platform plinths are an ideal solution for elevating large, heavy items, commonly used for displaying fashion mannequins or models. The metal frame construction is formed from raw steel that is designed to support large weights. A single platform will support a weight of approximately 200 kg. With the frame and surface being made from matching material these are perfect alongside our Metal Frame Plinths as well as Metal Frame Hanging Rails. These plinths are also available on a bespoke order basis, with the option of selecting from a variety of powder coat colours (additional charges apply for bespoke colours).
